

## **Job Description**

**Position Title: Project Engineer**

**updated: January 20, 2018**

### **Position Summary:**

ALZETA Corporation, a leading manufacturer of advanced combustion and gas treatment equipment, is searching for a qualified hardware-oriented engineer to assist in delivering ALZETA products and systems to our customers. Motivated individuals with strong hands-on technical skills, proven project experience, and excellent communications skills are required.

### **Duties and Responsibilities:**

- Responsible for coordination of activities required to deliver ALZETA combustion equipment to customers. These responsibilities include maintaining schedule, budget, and technical control of projects.
- Ensure effective communication and coordination between suppliers, in-house engineering and manufacturing teams, and the customer.
- Ensure compliance with contract requirements, all applicable regulatory codes, and ALZETA engineering and manufacturing standards
- Must have sufficient technical knowledge and attention to detail to recognize technical problems as they develop, and to be able to initiate corrective actions
- In addition, the Project Engineer will provide technical support to members of the Sales and Marketing group in support of proposals and promotional efforts

### **Experience Required:**

- BS or MS in Mechanical Engineering
- 3+ years relevant work experience
- Basic 3D CAD skills a plus
- Excellent oral, written, and interpersonal communication skills required
- Comparable combination of education, training, and experience will be considered

**Reports To:** Product Development Manager

**Salary Range:** Commensurate with experience and qualifications.

**Facility Location:** Santa Clara, California 95054
